Mission of RTL Data

For our **Daily Business**

For our End Customers

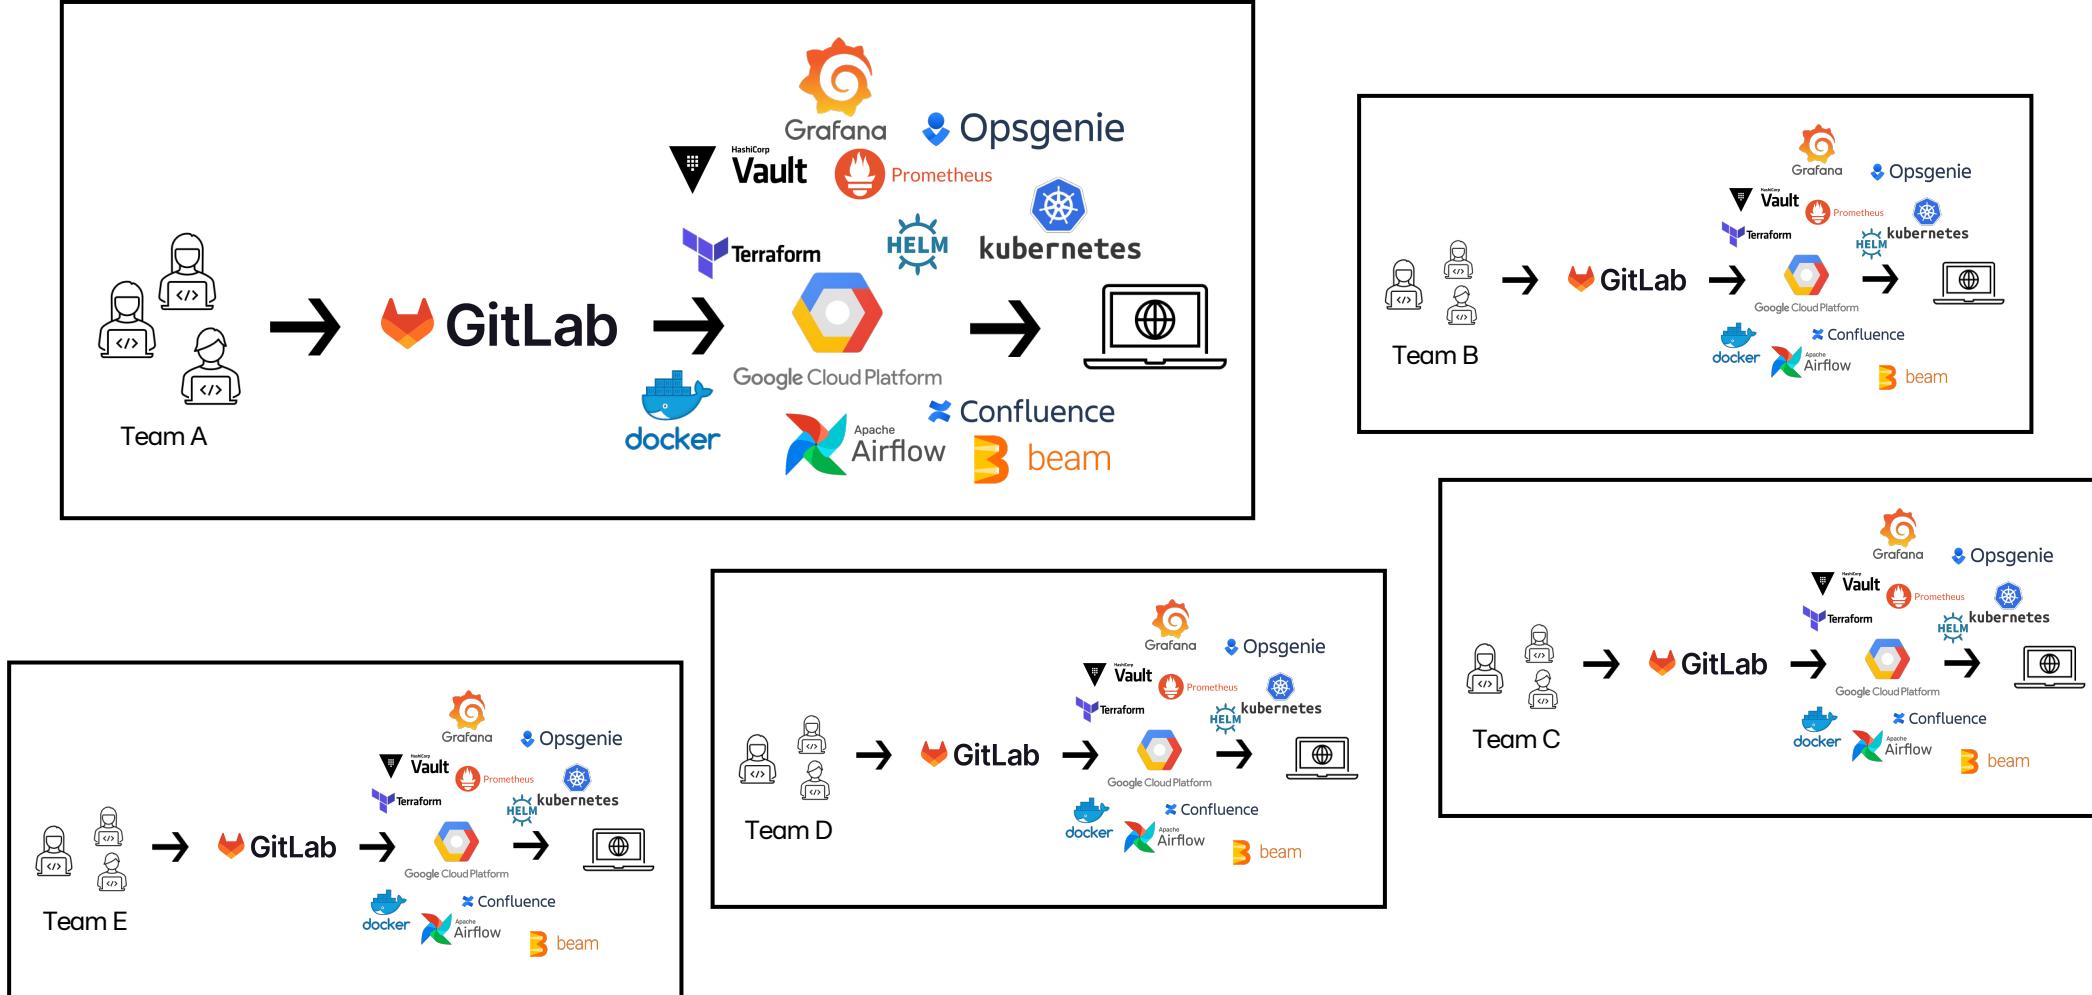

We are hiring Cloud Platform Engineers!

Disclaimer

Intro

Deploying an application..

Internal Developer Platforms (IDPs)

... are configured by Ops teams and used by developers. Ops teams specify what resources start up with what environment or at what request. They also set base-line templates for application configurations and govern permissions. This helps them to automate recurring tasks such as spinning up environments and resources and makes their setup easier to maintain by enforcing standards. Developer teams gain autonomy by changing configurations, deploying, spinning up fully provisioned environments, and rollback. IDPs can be built or bought.

3/5

101 Building an Internal Developer Platform

Platform Products & Services

- Cloud Accounts (GCP/AWS/Azure)
- Git + CI/CD (IaC/Source Code)
- Base Infrastructure (IaaS)
- Identity and Access Management (IAM)
- Application Runtime (K8s/Docker/Config/Secrets)
- Monitoring & Alerting
- Backup & Recovery

Job done.

4/5

Core Principles at RTL Data

Platform as
product

Autonomous Product Teams

Decentralized
but highly
standardized

CMDB as single
source of truth

Highly opinionated & integrated toolstack

... but options to leave the paved road

Listen & Inform

tl;dr

- 1. Developers are customers.**
- 2. Platforms are products.**
- 3. Platforms require product development.**
