

# People & Products

Lessons learned from the daily IT madness

Arnold Bechtoldt

Systems Engineer - @arnisoph - arbe.io

# Continuouously fail..

by applying best practices!

**Arnold Bechtoldt** 

Systems Engineer - @arnisoph - arbe.io

Based on true stories...

#### Scrum

#### Reality Check

- \* Product owner defines well-defined user stories Bad specification.
- \* Regularly backlog refinements No refinements at all.
- \* Everyone knows the current progress Staled tickets. No estimates.
- \* Clear communication paths Multiple roles on the same person.
- \* Software development is so much faster Meeting madness.
- \* Everybody is happy No retros -> no improvements.

#### Scrum

Agile Manifesto (agilemanifesto.org)

- Individuals and interactions over processes and tools
- ☐ Working software over comprehensive documentation
- ☐ Customer collaboration over contract negotiation
- Responding to change over following a plan

# DevOps Reality Check

- ★ DevOps everywhere Some like 9to5.
- \* Everybody lives the spirit "I don't want to do ops"
- \* Actually manage infrastructure Insufficient access rights/trust.
- \* Getting things done (faster) Tools/Know-how missing.
- \* Ops people aren't needed anymore! Who builds the tools? Who is on-call?
- ★ Everybody is happy Nope.

# Docker & Kubernetes

#### Docker & Kubernetes

#### Reality Check

- \* Perfect workload Cloud-native? A monolith in a container...
- \* Scale indefinitely Not capable of HA.
- ★ Easy deployment Container as VM replacement.
- ★ Downtime-free No HA, no rolling update!
- ★ Easy rollbacks What about state?
- ★ Ops people aren't needed anymore! Who runs K8s? "I hate YAML"
- ★ Everybody is happy Docker & K8s changes a lot...

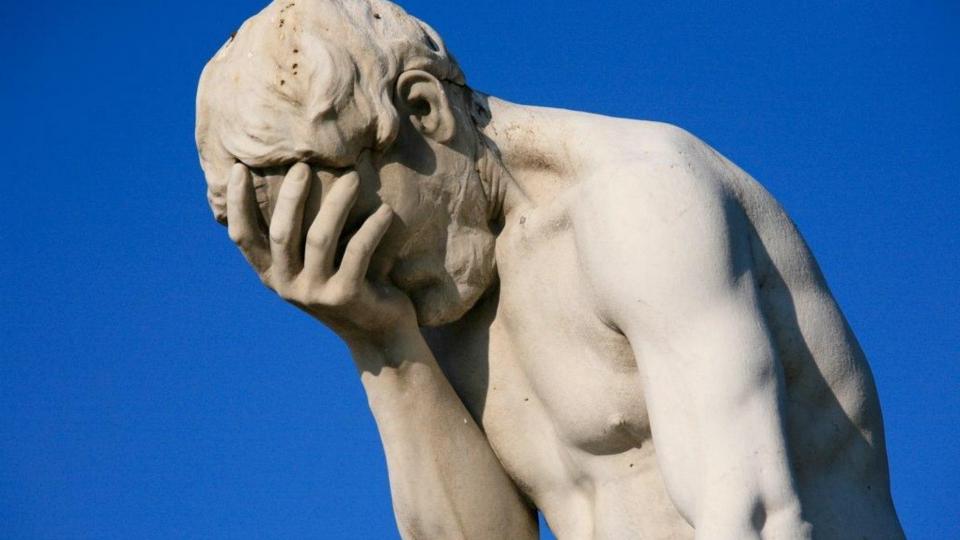

## Continuous Integration & Delivery

Reality Check

- ★ Transparency Silo-thinking. Bad Git/CI integration.
- \* Easier build failure troubleshooting Long-running jobs. Flapping tests.
- \* Fast development Local environment != CI environment
- \* Automated build/test/release/deploy Databases? External APIs?
- \* Rapid releases MGMT says no. Environments level over 9000?
- \* More code reviews Distributed team? Bad capacity planning?
- \* Parallelization "Can I have JDK version x?" CI still not containrized.

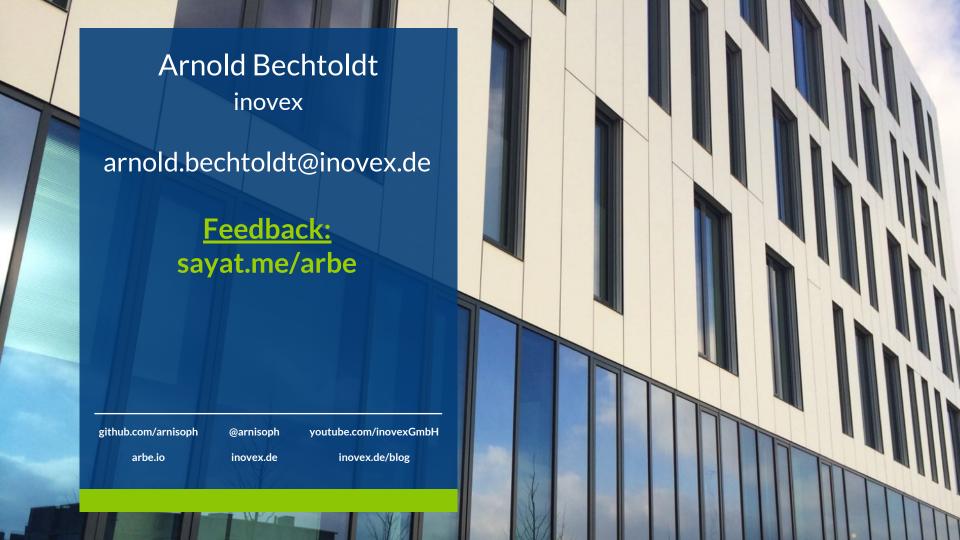

#### **Conclusions**

- Individuals and interactions over processes and tools!
- Ask which problem should be solved!
- Keep it simple stupid!
- Do it incremental!
- Accept failures! (early, often, fast)

# If you want to increase your success rate, double your failure rate.

Thomas J. Watson

### DevOps

Why does it matter?

- → Devs are the better Ops!
- → Automation everywhere! (APIs)
- → Emancipation!
- → It saves money! ⊙
- → Everybody does! ⊙

#### **Docker & Kubernetes**

#### Why does it matter?

- → Lightweight!
- → Faster!
- → Google made it!
- → Docker/Kubernetes is made from our people!
- → Self-managed build and runtime!
- → Easier to scale!
- → API for everything, it's PaaS!
- → It saves money! ⊙
- → Everybody does! ⊙

#### Scrum

Why does it matter?

- → Transparency!
- → Short development cycles!
- → More accurate estimates!
- → Emancipation!
- → It saves money! ⊙
- → Everybody does! ⊙
